LINDELL OFFENSE FUND

BREAKING: WMD's prove to be wildly successful!

The Lindell Election Summit revealed The Plan to save our election platforms. Two major components were: FrankSocial for REAL time election reporting and the use of Wireless Monitoring Devices (WMD) to detect when election machines are online, which is against the law.

***** Franksocial tracked 44 incidents of machines failing on election day and
*20 real time reports of paper ballot anomalies, and
*over 200 election incidents reported across 18 states.***

For the first time we are collecting, organizing and investigating election anomalies in real time all across the country! This is a huge victory for the people.

URGENT: Although electronic voting machine companies have emphatically declared their machines are not online and do not contain bluetooth modems- we have reports of Ballot printers going online with multiple tabulators tethered to the printing machines during Tuesday's elections. This is supposed to be impossible. For now, we are concealing critical details to protect election clerks from retaliation.

So far we also know:

******** Pennsylvania elections systems WERE "programmed for the election" - the votes being cast were flipped for the opposing candidate inside the machine. Election officials have attempted to chalk it up to "human error" & dismiss the ramifications of this story: the machines are programmable and WERE programmed for a particular result: *to flip the selected vote to the opposing candidate.*

******** Kentucky Governor election has an unbelievable outcome. So much so that all hands are on deck to fight the suspicious outcome.

******** One of the biggest Democrat county strongholds in Kentucky has been cleared out due to a supposed "gas leak".

******** In Indiana, the Secretary of State was monitoring "power outage" issues across the state despite the lack of any severe weather.

******** Colorado citizens began receiving notifications their ballots had been counted. Only problem- they had not yet cast their ballot.

******** 6 new counties are pledging paper ballot hand count elections now!

Bottom Line: FrankSocial is sharing reports on election incidents AHEAD of MSM, while federal agencies like DHS, CISA, and the Global Engagement Council work to censor discussion of our elections as revealed in Congressman Jim Jordan's recent report, FrankSocial is enabling citizen journalists to inform America on a safe and trusted platform.

By all measures, the 2023 election warmup to "The Plan" has been an overwhelming success. To see the latest collection of incidents organized by state, go to the Elections feed on [FrankSocial.com](https://franksocial.com).

For a rollup of the most significant incidents, see the [Election Alert feed](#).
