

MEDIA RELEASE

Mike Lindell Announces Voter Identity Protection Program

[Detroit, MI]—June 21, 2024

FOR IMMEDIATE RELEASE:

At the Turning Point USA People’s Convention in Detroit, MI, **Mike Lindell** revealed the latest component of his Plan to secure the 2024 election. During his speech, Lindell called on attendees to request absentee ballots for the upcoming 2024 election and cast those ballots in-person on election day.

“If the election day poll worker reveals that records show that a ballot has already been cast in a voter’s name, they can reveal the sealed ballot envelope in their possession and ask the poll worker to record the fact that their ballot had been cast fraudulently,” says Lindell. “The voter can then proceed to file a complaint with local law enforcement and request a provisional ballot so that their voice can be heard at the polls.”

This new component of Lindell’s Plan is referred to as the **Voter Identity Protection (VIP)** project. It fills an important gap in Lindell’s layered defense strategy, related to the fraud indicators identified by **Dr. Douglas Frank** in Lindell’s documentary *Scientific Proof*. In the documentary, Dr. Frank demonstrated scientific evidence of machine-based algorithms in counties all across America. The algorithm leveraged bloated, inaccurate voter rolls to allocate ballots to voters unlikely to cast ballots in a given election because they were either dead, had moved, had changed their name (e.g. marriage), or had requested an absentee ballot but had yet to return that ballot. This allocation would be performed in manual, semi-automated or fully automated “ballot factories” where completed ballots would be inserted into ballot envelopes with pertinent voter information and then organized into community-specific bundles. These bundles would in turn be deposited at drop boxes or mailboxes within the pertinent community.

When delivered to election officials for pre-tabulation processing, election officials are generally limited to the information provided by state voter registration systems when it comes to validating the identity of the voter. If the ballot envelope information matches the information in the state’s centralized voter database, the identity of the absentee voter is considered “validated” and is released for tabulation.

This mail-in ballot fraud mechanism is almost impossible for local election officials to detect. Short of ballot factory or ballot distribution whistleblowers, the only ways to detect such fraud is typically after the fraud has been successfully used to subvert an election. One way is via statistical analyses of election records such as that performed by Dr. Frank. Another way is via the canvassing of voters after the election to see if the voter history data managed by the state is consistent with field observations in the suspect communities. Yet another way is to

monitor drop boxes for illegal activity such as that documented by **True the Vote** in the Dinesh D'Souza documentary *2,000 Mules*.

The VIP project aims to enable detection of this fraud mechanism much sooner—*during* the election.

Voters interested in participating in the VIP project can visit LindellPlan.com. Participants will be asked to report incidents via another component of Lindell's layered defense strategy: his social media app known as [FrankSocial](#). Using hashtags and geocodes, volunteers can report their election fraud incidents in a standardized manner. Anyone can then monitor the status of these incidents using another component of the Lindell Plan known as [Election Nexus](#). In addition to other useful datasets, Election Nexus provides users with access to real-time maps of VIP incidents at the state and county level. These maps provide election fraud investigators and their legal teams with the information they need to prioritize their efforts.

The VIP project is but one of many initiatives made possible by Mike Lindell and his Lindell Offense Fund, but it is a very important one. It is fitting that this project was launched in Detroit where, during the 2020 election pizza boxes were used to block observation windows, tabulators were connected to the internet and early morning ballot drops were made without any chain of custody. 71% of the Absentee Vote Counting Boards in the City of Detroit were unbalanced meaning that the number of ballots issued per the poll books did not agree with the number of ballots cast. The VIP project will provide the real-time evidence needed to ensure that such observations are a thing of the past.
